APPROVAL SHEET

This research entitled "AGGRESSIVE BEHAVIOR AFFECTING THE LEARNING PROCESS OF THE PUPILS AT BALILI ELEMENTARY SCHOOL" submitted by Ronalyn C. Baglao, Novy S. Baliba, Arlyn A. Cabanilla, Angela T. Tomey, and Ruby Claire S. Urnis, in partial fulfillment of the requirements for the subject EDUCATIONAL RESEARCH, has been examined and is hereby accepted and approved.

RAMON D. SANTIAGO, Ed. D.
College Professor 3

CERTIFICATION

This is to certify that all sources used in this study have been acknowledged or duly cited.

This is to certify further that the research is an original undertaking and had been submitted for another degree.

ACKNOWLEDGEMENT

This work has been successful due to the assistance and cooperation of many personalities. The researchers would like to express their sincere appreciation and heartfelt gratitude to the following:

To the almighty GOD, whose wisdom, ability and divine providence has enabled the researchers to complete this study. May his name be glorified forever.

To their parents, siblings, relatives, and friends for giving the care, love, and encouragement during the days of obstacles for being great providers as well as for all the sacrifices.

To Dr. Ramon D. Santiago, the researchers instructors, for the patience, never ending guidance, inspiring words, suggestions, assistance, kindness, and willingness to help finished study.

To the respondent thank you for their participation in answering the questions that help for the successful of the study. The School of Balili Elementary thank you for your support, and approval in floating of our questionnaire

To everyone who is not mentioned thank you for your great support, advices, and prayers to help our research be successful.

ABSTRACT

This thesis entitled "AGGRESSIVE BEHAVIOR AFFECTING THE LEARNING PROCESS OF THE PUPILS" prepared and submitted by RONALYN C. BAGLAO, NOVY S. BALIBA, ARLYN A. CABANILLA, ANGELA T. TOMEY, RUBY CLAIRE S. UMIS was successfully defended on November 26, 2016.

This study is a descriptive survey on aggressive behavior affecting the learning of the pupils. It specifically aimed to focus on the common aggressive behavior of the pupils at Balili Elementary School and the level of extent of the common aggressive behavior on the academic performance of the pupils.

These findings the respondents generally agree on the extent of Hostile and Relational aggressive behavior wherein it affects the pupils. Furthermore the respondents agree on the extent of aggressive behavior in affecting the pupil's interest to learn more.

INTRODUCTION

This study covers the Background of the study, Conceptual Framework, The paradigm of the study, Statement of the problem, Importance of the study and scope and delimitation and Definition of the study.

Background of the Study

From the book of child psychology seventh edition by Ross D. Park and Mary Gauvain, state that aggression refers to the behavior that is intended to and does harm other people by inflicting pain or injury on them

Shaw et al. (2000b) described early aggressive behavior as an "act directed toward a specific other person or object with intent to hurt or frighten, for which there is a consensus about the aggressive intent of the act".

Krebs (1982), defined aggression as any behavior intended to harm other person that the target person wants to avoid. According to this definition, a bungled assassination is an act of aggression while heart surgery—approved by the patient and intended to improve his or her health—is clearly not aggression, even if the patient dies.

Sigmund Freud (1930, 1950), he considered aggression to be a basic human instinct. To Freud, the innate urge to destroy is as natural as our need to breathe. This instinct constantly generates hostile impulses that demand release, and we often release these hostile impulses by aggressing against others. And if our aggressive impulse are innate, that means they must be passed to us through our genetic code and a result of long evolutionary process.

According to Konard Lorenz, aggression that causes physical harm to others springs from a fighting instinct that humans share with other organisms. The energy associated with this instinct is produced spontaneously in organisms at a more or less constant rate.

Several points need to be considered before identifying aggressive behavior as a disorder. The typical rough and tumble play of preschoolers forms a scaffolding to support prosaically assertive play. What distinguishes playful fighting from aggressive behavior is the lack of intent to hurt or frighten. During the preschool years, children tend to resort to instrumental and physical expression of aggression such as snatching toys and pushing a playmate. Hostile aggression that is exhibited as aggressive behavior directed to others, such as name-calling, criticizing and ridiculing, comes much later, at around 7 years of age (Coie & Dodge, 1998).

The current literature suggests that aggression starting at an early age continues throughout development (Campbell, 2002; Shaw et al., 1996). Understanding the developmental trajectories of aggression is one way to study aggression (Tremblay, 2004). Approximately thirty-eight years ago, Lee Robins conducted the first follow-up of children seen at child guidance clinics and discovered that problem children can become problem adults (Robins, 1966). Meta analytic studies have confirmed high stability coefficients for aggressive behavior (Olweus, 1979). Generally, early aggressive behavior is predictor of later aggressive behaviors.

Conceptual Framework

Principles of behavior describe the relation between behavior and the variables that control it. We choose the topic which is COMMON AGGRESSIVE BEHAVIOR affecting the learning of the pupil at Balili Elementary School because it simply defined that human behavior is the collection of activities performed by human beings and influence by culture, attitude, values, ethics, authority, rapport, hypnosis, persuasion and/or coercion.

According to the theory of behaviorism it stated that this stresses the importance of having a particular form of behavior reinforced by someone, other than the student, to shape or control what is learned. In aviation training, the instructor provides the reinforcement. Frequent, positive reinforcement and rewards accelerate learning. This theory provides the instructor with ways to manipulate students with stimuli, induce the desired behavior or response, and reinforce the behavior with appropriate rewards. In general, the behaviorist theory emphasizes positive reinforcement rather than no reinforcement or punishment.

Other features of behaviorism are considerably more complex than this simple explanation. Instructors who need more details should refer to psychology texts for a better understanding of behaviorism. As an instructor, it is important to keep in mind that behaviorism is still widely used today, because controlling learning experiences helps direct students toward specific learning outcomes.

Learning Theories

A. Theories of Aggression

Aggressive and violent behavior can be viewed along a continuum with verbal aggression at one end and physical violence at other end. Specific reasons for aggressive behavior vary from person to person. Anger occurs in response to a perceived threat. This may be a threat of physical injury or more often a threat to the self-concept. When the self is threatened, people may not be entirely aware of the source of their anger. A threat may be internal or external. Examples of external stressors are physical attack, loss of a significant relationship and criticism from others. Internal stressors might include a sense of might include a sense of failure at work, perceived loss of love and fear of physical illness.

Anger is the only one emotional response to these stressors. Some people might respond with depression or withdrawal. However, those reactions are usually accompanied by anger which may be difficult for the person to express directly. Depression is sometimes viewed as anger directed towards the self, and withdrawal may also be a passive expression of anger. A number of theories on the development of aggressive behavior have influenced the treatment of violent patients. They can be categorized as psychological, socio cultural and biological.

B. Psychological Theory

One psychological view of aggressive behavior suggests the importance of predisposing developmental or life experiences that limit the person's capacity

to select nonviolent coping mechanisms. Some of these experiences may include: Organic brain damage, mental retardation or learning disability, which impair the capacity to deal effectively with frustration, Severe emotional deprivation or overt rejection in childhood, or parental seduction, which may contribute to defects in trust and self-esteem, and Exposure to violence in formative years, either as a victim of child abuse or as an observer of family violence, which may instill a pattern of using violence as a way to cope. It has been also suggested that a disruption in the mother infant bonding process can lead to the development of poor interpersonal behavior that may increase the likelihood of violent behavior. When combined with neurological deficits, the risk of violent behavior is increased.

Social learning theory proposes that aggressive behavior is learned through the socialization process as a result of internal and external learning. Internal learning occurs through the personal reinforcement received when enacting aggressive behavior. This may be the result of achieving a desired goal or experiencing feelings of importance, power and control. External learning process occurs through the observation of role models such as parents, peers, siblings and sports and entertainment figures. Sociocultural patterns that lead to the imitation of aggressive behavior suggest that violence is an acceptable social status.

Activities such as violent crime, aggressive sports, and war depicted through the media or witnessed, in person reinforce aggressive behavior.

C. Socio-cultural Theory

Esc

Social and cultural factors also may influence aggressive behavior. Cultural norms help to define acceptable and unacceptable means of expressing aggressive behavior feelings. Sanctions are applied to violators of the norms through the legal systems. By this means, society controls violent behavior and attempts to maintain a safe existence of its members. A cultural norm that supports verbally assertive expressions of anger will help people deal with anger in a healthy manner. A norm that reinforces violent behavior will result in physical expression of anger in destructive ways. Social determinants of violence are the Poverty and the inability to have basic necessities of life, Disruption of marriages, Production of single-parent families, Unemployment and Difficulty in maintaining interpersonal ties, family structure and social control.

D. Biological Theory

According to Perry (1997), core neurobiology is determined by early life experiences. The absence of optimal motor, sensory, emotional, cognitive, and social experiences during infancy and childhood can result in underdevelopment of the cortical, subcortical and limbic areas. This results in a decreased capacity to moderate frustration, impulsivity, aggression and violent behavior (Perry, 1997).

Several neurotransmitters, hormones and the autonomic nervous system have also been implicated in the development of aggression in general (Coie & Dodge 1998).

Esc

Current biological research has focused on three areas of the brain believed to be involved in aggression: Limbic System, Frontal Lobes, and Hypothalamus.

By the time the toddlers are old enough to play with one another, they show aggression. For example, 1-year olds sometimes use physical aggression to resolve their conflicts Dodge, Coie and Lynam, 2006. The following are the forms of aggression;

a. Instrumental Aggression

A child uses aggression to achieve an explicit goal. By the start of the elementary-school years, another form of aggression emerges Coie et al., 1991;

b. Hostile aggression

Is unprovoked and seems to have its sole goals to intimidate, harass, or humiliate another child. Hostile aggression is illustrated by a child who spontaneously says, 'You're stupid' and then kicks a classmate; and

c. Relational Aggression

In which children try to hurt others by undermining their social relationships.

d. Reaction Aggression

Children act aggressively only in response to being attack, threatened, or frustrated. These children are particularly likely to misinterpret other's intentions (Poulin and Boivin, 2000).

e. Proactive Aggression

Children use force to dominate another person or to bully or threaten others. They are quite accurate in reading other's intentions, but they don't care about their intentions, just about dominating them.

There are factors also that affect the learners that it helps develop the behavior:

a. Socio- Cultural Factor

According to Sigmund Freud held that all human behavior stems either directly or indirectly from two instincts. These are Eros and Thanatos. Eros -It is the life the life instinct –whose energy or libido is directed towards the enhancement or reproduction of life. In this frame work, aggression was viewed simply as a reaction to blocking or thwarting of libidinal impulses and was neither an automatic nor an inevitable part of life. Thanatos: It is the death force-whose energy is directed towards the destruction or termination of life.

According to Freud, all human behavior stem from the complex interplay of Thanatos and Eros and the constant tension between them. Because the death instinct, if unrestrained, soon results in self-destruction. Freud's hypotheses stated that through the mechanism such as displacement, the energy of Thanatos is redirected towards and serves as the basis of aggression against others. Thus according to him, aggression primarily stems from the redirection of the self-destructive death instinct away from the self and towards others.

b. Social Factor

The single most potent means of inciting human beings to aggression is frustration. Widespread acceptance of this view stems from John Dollard's

frustration, aggression hypothesis. This hypothesis indicated that frustration always leads to a form of aggression and that aggression always stem from frustration. Frustrated persons do not always respond with aggressive thoughts and words, or deeds. They may show a wide variety of reactions ranging from resignation, depression and despair to attempts to overcome the sources of frustration. Examination of the evidence indicates that whether frustration increases or fails to enhance covert aggression depends largely on two factors. First, frustration appears to increase aggression only when the frustration is intense. When it is mild or moderate, aggression may not be enhanced. Second frustration is likely to facilitate aggression when it is perceived as arbitrary or illegitimate, rather than when it is viewed deserved or legitimate.

c .Teacher Factor

This will affect the behavior of the learner it is where they are developing their own behavior. It can build the learners behavior neither it will have a good impact nor in the different way because of the teachers appearance and the personality he/she takes.

Teachers are judged more strictly than other professionals. The personality they project determines the impressions they make upon students and colleagues. Their poise, bearing, manner of dressing and facial expression have an impact on their inter action with pupils.

The competent and committed teacher facilitates learning. He/she opens the door. The learner enters by himself/herself. Teacher is a licensed professional teacher who possess dignity and reputation with high moral values

Esc

Esc

as well as technical and professional competence. Teacher's passion for teaching, sense of humor, patience and enthusiasm and other positive personal attributes make him/her a true facilitator of learning.

d. Home Factor

This may affect the learners because home is their first school it is the first and foremost beginning of building their own behavior if the people around him/her are showing good then it will follow then and the same the opposite of it.

e. Environmental Factor

Aggression is primarily a learned form of social behavior. According to Albert Bandura, neither innate urges toward violence nor aggressive drives aroused by frustration are the roots of human aggression. He said that aggression is the learned behavior under voluntary control. The learning of aggressive behavior occurs by observation and modeling. For example, a child watches an angry parent strike out another person. Learning aggressive behavior also takes place by direct experiences. The person feels anger and behaves aggressively. If behaving aggressively brings rewards, the behavior is encouraged.

f. Classroom Factor

Another important factor is classroom condition. The classroom, as stated by Lim 2010, that is equipped with sufficient and varied materials for instruction, which is properly managed by the teacher with a wholesome learning atmosphere created by the teacher, provides a conducive learning environment where children truly enjoy a place of learning because there are many materials'

as well as technical and professional competence. Teacher's passion for teaching, sense of humor, patience and enthusiasm and other positive personal attributes make him/her a true facilitator of learning.

d. Home Factor

This may affect the learners because home is their first school it is the first and foremost beginning of building their own behavior if the people around him/her is showing good then it will follow then and the same the opposite of it.

e. Environmental Factor

Aggression is primarily a learned form of social behavior. According to Albert Bandura, neither innate urges toward violence nor aggressive drives aroused by frustration are the roots of human aggression. He said that aggression is the learned behavior under voluntary control. The learning of aggressive behavior occurs by observation and modeling. For example, a child watches an angry parent strikes out another person. Learning aggressive behavior also takes place by direct experiences. The person feels anger and behaves aggressively. If behaving aggressively brings rewards, the behavior is encouraged.

f. Classroom Factor

Another important factor is classroom condition. The classroom, as stated by Lim 2010, that is equipped with sufficient and varied materials for instruction, which is properly managed by the teacher with a wholesome learning atmosphere created by the teacher, provides a conducive learning environment where children truly enjoy a place of learning because there are many materials'

to use or manipulate. Children are motivated to learn with a caring and friendly teacher they could run to when needed.

Learning is the central goal of the total school operation technique. Effective teaching and effective learning take place in a well-managed classroom. As pointed by Everston 2012, 'good classroom management contributes greatly to helping the child in his academic 'performance'.

Catharsis Strategy

Catharsis Myth is one of the most persistent about aggression is that if people have ample opportunity to engage in aggressive acts, whether in actuality or symbolically that do not impinge on another person, a process known as catharsis, they will be less likely to act on hostile aggressive urges.

Cognitive Modification Strategies

According to the social information-processing approach to aggression, aggressive children may behave hostile and inappropriate fashion because they are socially unskilled; that is, they're not very good at solving interpersonal problems(Dodge et al., 2006).

Adjustment Strategy

As Beltran (1987) puts it, life is essentially a coping process. He referred to adjustment as the means of which the individual copes with his ever changing needs, motives and habits on the one hand and with the ever changing opportunities, demands and restrictions of the environment on the other hand.

Adjustment or adaptation is a way of moving on or regulating one's behavior to be able to cope with situations that brings discomfort to a person.

This may be the case of unmet needs, unattained goals, and obstacles brought about by other person or maybe uncontrolled situations. The discomfort that a person feels may result to stress and may leads to aggression.

Arenas (2004) defined coping as the process by which a person attempts to manage stressful demands. Lazarus (1993, 2000) believes that people can make two general types of coping; problem-focused coping and emotional-focused coping. Lazarus referred coping as the cognitive strategy of squarely facing one's troubles and trying to solve them and emotion-focused coping as means of responding to stress in an emotional manner, especially by using defensive mechanism.

Statement of the Problem

This study sought to answer the following questions:

The main purpose of this behavior is to look into the aggressive behavior of the grade six pupils in the Balili Elementary School;

Specifically, this study result the factors affecting the behavior of the pupils in the Balili Elementary School.

Scope and Delimitation

This study focused on what are the aggressive behavior affecting the learning of the pupils at the Balili Elementary school. It also covered the factors of aggressive behavior and the strategies employed to prevent the aggressiveness of the pupils.

The limitation of this research is only at BALILI elementary school and about the behavior of the pupils we are not able to cover the other schools. This study will serve as our basis and guide for us to have the strategy that is appropriate to apply in teaching.

Importance of the Study

The importance of this study is significant for the respondents to be able to determine the range of their aggressiveness and how they will be able to prevent it. It helps also wherein they will be aware on what the dos and don'ts that they will do to control their aggressive behavior.

This study can be useful information to the teachers regarding of the behaviors of their students, which affect the learning process, this information will help the school and the teachers in managing the behavior of the pupils. Through

to this study teachers can use the strategies that we found out that can help them to deal with the hostile-aggressive behavior of the pupils and for the development of the pupils learning.

Furthermore, we researchers are challenge to test our capability, team work, cooperation, patience, respect, unity and self-discipline. On the other hand, this study can help us to determine how the behavior can affect the learners in their studies. Through their answers we can gather ideas and have knowledge in solving this problem. We can also collect information through them.

As future teachers this study will give us information or knowledge that will help us in teaching in the future. Besides conducting this study we can learn more about the behavior of the pupils.

METHODOLOGY

This chapter presents the research design, population and location of the study, data gathering instruments, validity and reliability and treatment of the study.

Research Design

In this study, descriptive type of research is used in gathering, organizing, and presenting the data in order to determine the different aggressive behavior among the pupils of grade VI pupils of Balili Elementary School. The study will be conducted through observation and questionnaires.

The researchers made use of descriptive method that is designed to collect data about the present condition. The researchers did not use historical method because they are studying about the past events and they did not use experimental method because they are not also studying for the future events.

In addition, the conceptualizing of descriptive research (categorization or taxonomy) precedes the hypotheses of explanatory research. The main goal of this type of research is to describe the data and characteristics about what is being studied. Descriptive research is mainly done when a researcher wants to gain a better understanding of a topic. Descriptive research is the exploration of the existing certain phenomena.

Population and Location of the Study

The study involved all the grade VI pupils from Balili, Elementary School. Located at Central Balili La Trinidad Benguet 2016-2017.

Data Gathering Instrument

The researchers used questionnaire to determine the different aggressive behavior of grade VI pupils of the Balili Elementary School. The questionnaire was based from the definition and types of aggressive behavior that has been discussed in the conceptual framework. The first part of the questionnaire is the types of aggression behavior it is intended to determine the common aggressive behavior based on their responded and the second part is the factors affecting the pupils to exhibit aggression among the grade six pupils.

Before the researchers gather the questionnaire they asked information to the school principal, Sir Marcelino S. Baldo to administer the questionnaires to the pupils or respondent.

Validity and Reliability. The instrument is valid because the first draft of the questionnaire has been presented by the instructor that the researchers chosen who evaluated and validated the questionnaires. The researchers used test-retest to determine the aggressive behavior among the grade six pupils at the Balili Elementary School.

Data Gathering Procedures

The researchers wrote a letter to the principal of Balili Elementary school asked permission to administer the questionnaire to the grade six pupils. The questionnaire was formulated by the researchers based from the definition and types of aggressive behavior that has been discussed in the conceptual framework. The researchers administered the questionnaires to the pupils on November 11, 2016 it also retrieved at the same day.

Treatment of Data

Descriptive statistics is used to conduct the data gathering to tabulate the weighted mean of the answers of the respondents. It will help the researchers to determine the most common aggressive behavior of the pupils of Balili Elementary School to be able to prevent or lessen it.

Value	Limit	Descriptive Equivalent
4	3.26-4.00	Very Much Exhibited
3	2.51-3.25	Much Exhibited
2	1.76-2.50	Exhibited
1	1.00-1.75	Less Exhibited

Value	Limit	Descriptive Equivalent
4	3.26-4.00	Very Much Manifested
3	2.51-3.25	Much Manifested
2	1.76- 2.50	Manifested
1	1.00-1.75	Not Manifested

RESULTS AND DISCUSSIONS

This chapter presents the result of the common aggressive behavior *affecting the learning of the pupils at Balili Elementary School* where in aggression has its types that is specifically put in the table to identify which among this types are more common to the pupils.

Aggressive Behavior Affecting the Learning of the Pupils among the Grade Six Pupils at Balili Elementary School.

Based on the data gathered, the researchers were able come up with the following findings particularly on the extent of exhibited aggressive behaviour.

As table 1 present the extent of exhibited Instrumental Aggression of the pupils at Balili Elementary School. This indicates that punching and destroying their own things are the very much exhibited by almost the pupils because its weighted mean is 3.65. Destroying their own things has the weighted mean of 3.63 which means very much exhibited, kicking of chairs to get what they want rank number three which is exhibited and the last is throwing their things which is 1.91 meaning exhibited by the pupils.

Where in the situation is there is a pupils who got angry because his mother didn't give him allowance so when the he go to the classroom he punch and kick the wall to release his anger so his classmate are just quiet and take their seat.

Esc

Table 1. Extent of the Instrumental Aggression Exhibited by the Pupils at Balili Elementary School.

Instrumental Aggression	WM	DE	RANK
a. Kicking chairs to get what you want	2.00	E	3
b. Punching the wall to release anger	3.65	VME	1
c. Throwing your notebook, paper, and others.	1.91	E	4
d. Destroying your own things	3.63	VME	2
Average weighted mean	2.80	VME	

Table 2 presents the exhibited of Relational Exhibited by the pupils at Balili Elementary School. Relational Exhibited aggression also is the most behavior that affecting the learning of the pupils. It indicates that not making friends and spreading rumors towards. It has been presented in the table that spreading rumors towards others ranked as number 1 to be followed by not making friends because of physical appearance which ranked as number 2 next laughing one's mistake which ranked as number 3 and lastly testing your classmate. It is very important to pupils that as young as they are they should be disciplined so that wherever they go they reflect a positive behavior.

Based on the findings this Spreading rumors towards others are very much exhibited because on what we observe in our deployment for Field Study we hear that the pupils are gossiping each other even their friend. On the same day also when we are administering our questionnaire there is this one pupil who say that she just experienced to be the topic of her classmates who are gossipers wherein she is upset and even shouting to her classmate who is making a gossip about her. She said that she treats them as her friend but when she is not looking they are spreading rumors that make her personality destroy because of the words they say to her even though it is not true. She hurt her feelings and she does not want to come to school anymore.

Table 2. Extent of Relational Exhibited by the Pupils at Balili Elementary School.

Relational Aggression	WM	DE	RANK
a. Laughing someone's mistake	3.00	ME	3
b. Not making friends s because of physical appearance	3.6	VME	2
c. Teasing your classmate	2.93	ME	4
d. Spreading rumors towards others	3.63	VME	1
Average weighted mean	3.45	VME	

Table 3 Illustrate the exhibited Hostile- Aggression by the pupils at Balili Elementary School. Hostile- Aggression also is a major behavior that affecting the learning of the pupils. Punching others, threatening to beat up someone, and underestimating others indicates that these are the very much exhibited by the pupils that also affect their learning. Kicking their enemy also shows that this is much exhibited by the pupils.

Punching others is the top one where in most of the pupils do this in order to satisfy their own self. They prefer to hurt their classmates using their hands to punch it because it is easy to do especially when they are inside the classroom with their companions. It is better for the pupils to do this because it is not too hurt than to kick or underestimate their companion but this is bad most especially that they are children so it's better for the teacher to advise them for the pupils to control it. The teacher will also give punishment to those who will punch their classmates so that they will not do it again and to change their behavior from good that they will tell to the teacher if they do wrong. Kicking their enemy is the last where they only do this if their enemy hurts them too much so they kick in order to lessen their anger. But some pupils will do this not to forgive them but they will also hate their enemy so they do it only just to release their feelings.

1

2

Esc

Table 3. Extent of Hostile- Aggression Exhibited by the Pupils at Balili Elementary School.

Hostile- Aggression	WM	DE	RANK
a. Punching others to satisfy yourself	3.7	VME	1
b. Threatening to beat up someone	3.69	VME	2
c. Kicking your enemy	2.78	ME	4
d. Underestimating others	3.64	VME	3
Average weighted mean	3.45	VME	

Table 4 stated the exhibited Reaction Aggression of the pupils at Balilil Elementary School. This table indicates that most of the pupils are crying if they are frustrated. Misinterpreting others intention, blaming others for their mistake, and shouting if being threatened are much exhibited by the pupils and it shows that reaction aggression affects the learning of the pupils because they have this kind of behavior.

Based on the findings crying if frustrated is ranked as top one it's because the pupils are easily hurt. Today's generation if you say a word they are easily cry and they will not want to come to school anymore. In our observation there is a one pupil who is easily frustrated and he punch his classmate. The teacher will talk to the pupil if what is the cause of their argument and also she gives advice to them so that next time they will not do it again. Threatening to beat up someone is ranked as second it's because it has a weighted mean of 3.69 which is very much exhibited of the pupils at Balili Elementary School wherein they want to be popular to others especially to their teacher. The fourth ranked is the underestimating to others which is very much exhibited of the pupils wherein they have different behavior others are silent type of person and others are talkative, they are saying a negative words to their classmate that will make hurt them. Lastly, is the kicking your enemy has a weighted mean of 2.78 which is much exhibited because the pupils will not kick their classmate but they box each other.

Table 4. Extent of Reaction Aggression Exhibited by the Pupils at Balili Elementary School.

Reaction Aggression	WM	DE	RANK
a. Misinterpret others intention	2.53	ME	4
b. Blaming others for your mistake	2.92	ME	3
c. Crying if frustrated	3.56	VME	1
d. Shouting if being threatened	3.07	ME	2
Average weighted mean	3.02	ME	

Table 5 illustrates the exhibited Proactive Aggression of the pupils at Balili Elementary School. Proactive Aggression is affecting the learning of the pupils; this indicates that dominating others is very much exhibited among the pupils and threatening others, bullying others are much exhibited then do not care about others intention is not exhibited among the pupils.

Based on the findings dominating others is ranked as number one has a weighted mean of 3.59 which is very much exhibited of the pupils. In our Field Study we observed one pupil who wants to be friends with his classmate but one of their friends does not want to and they are bullying them. The reaction of the pupil was disappointed and regret. He is a silent type of person and he wants to socialize with other people but because on the incident happen he does not want to be make friends with others anymore. The teachers will talk to them to the pupil who bully him and give a piece of advice that it is not good to dominate others but to love one another. They belong to one group who will help one another to the activity given by their teacher especially those slow learners. They are a team who will encourage one another to enhance their skills and talents to participate in the activity and also socialize with one another.

Table 5. Extent of Proactive Aggression Exhibited by the Pupils at Balili Elementary School.

Proactive Aggression	WM	DE	RANK
a. Dominating others	3.59	VME	
b. Do not care about others intention	1.34	NE	
c. Threatening others in getting what you want	3.23	ME	
d. Bullying others	2.49	ME	
Average weighted mean	2.66	ME	

Table 6. The Summary table of the Extent of Aggressive Behavior Exhibited by the Pupils at Balili Elementary School.

Types of aggressive Behaviours	WM	DE	RANK
a. Instrumental aggression	2.80	ME	4
b. Relational aggression	3.45	VME	1.5
c. Hostile aggression	3.45	VME	1.5
d. Reaction aggression	3.02	ME	3
e. Proactive aggression	2.66	ME	5
Average weighted mean	3.08	ME	

This chapter presents the factors affecting the behavior of the pupils at Balili Elementary School. The types of factors are being specifically identified in each table and its indicators.

Factors Affecting the Behavior of the Grade Six Pupils at Balili Elementary School.

Table 7 presents the Manifestation of a Teacher Factor Affecting the Pupils at Balili Elementary School. Teacher factor ranked seventh among the seven categories of factor affecting students learning as indicated with the average weighted mean of 3.11 having the less impact on the learning process. The table indicates that a teacher equipped with physical and mental state is very much manifested, proper attire and proficiency in teaching all the subject is much manifested then self- confidence is manifested among the teacher that affects the learning of the pupils.

Physical and mental state is the first rank because it will affect the pupils if the teacher is not knowledgeable to the subject matter. As to the professional attributes by Arrends 1994 a professional teacher perceives himself\herself as someone who can effect change or learning, sense of efficacy because he\she is an expert in what he/she teaches subject matter knowledge and in how she/he teaches pedagogical knowledge.

According to the code of ethics for professional teachers article II the teacher and the state in section 3 stated that the interest of the state and of the Filipino people as much as of his own every teacher shall be physically fit,

mentally fit and morally fit. This code of ethics aims to help the teacher and students where in if the teacher are physically fit, mentally fit and morally fit the teachers can teach with credibility and they are at a good condition.

Table 7. Extent of Teacher Factor Manifestation affecting the learning of the Pupils at Balili Elementary School.

Teacher Factor	WM	DE	RANK
a. Proper attire	3.00	MM	3
b. Self- confidence	2.67	M	4
c. Proficiency in teaching all the subjects	3.25	MM	2
d. Physical and mental state	3.53	VMM	1
Average weighted mean	3.11	MM	

Esc

Table 8 illustrates the Manifestation of Home Factor Affecting the Pupils at Balili Elementary School. The table reveals that parental involvement in their child's literacy practices positively affects children's academic performance and is a more powerful force for academic success than other background variables such as happy home, adequate assistance, and loving, caring and concerned parent are very much manifested in the factors that affects the pupil.

It is very important because all of us need a guidance and protection from our parents. As we grow on we can stand in our own feet but still there are some who depends from their parents. The happy home and family relationship is ranked as the second indicators wherein if they have a problems comes they should solved earlier so that the learning of the pupils will not affected in school. As they say problems may come anytime so we should be always ready to face and take as a challenged about it. The third ranked in the indicators is the adequate assistant by parents to their children has a weighted mean of 3.42. Today's generation they cannot decide a thing without the help of their parents wherein their parents choose a better that is good for them. Comfortable distance of home from school is ranked as a last indicator has a weighted mean of 3.08. They say that even though how long they need to walk the importance is that they will be able to achieve their dreams. They have the patience and sacrifice and be leaders to the young generations.

Table 8. Extent of Home Factor Manifested by the Pupils at Balili Elementary School.

Home Factor	WM	DE	RANK
a. Comfortable distance of home from school	3.08	MM	4
b. Happy home and family relationship	3.63	VMM	2
c. Adequate assistance by parents to their children	3.42	VMM	3
d. Loving, caring, and concerned parent	3.75	VMM	1
Average weighted mean	3.47	VMM	

Table 9 presents the Manifestation of Pupil Factor affecting the Pupils at Balili Elementary School. The table reveals that physical condition such as good health ,physical fitness, proper nutrition ,and adequate food greatly affect academic achievement that can affect the learning of the pupils. Proper nutrition is ranked first in the pupil factor because these have a big impact on the learning of the pupil. On our observation in our field study there are pupils who cannot concentrate on their studies because they are hungry. They cannot comprehend about the lesson because they are not able to take their breakfast.

Mental condition ranked as the fourth on the pupils factor that affects the learning of the pupils because according to Piaget there are types of learning these are the following:

- A. Visual Learner- best learn when they see the things they are learning.
- B. Audio Learner- they best learn when they hear or listen to their lesson.
- C. Audio- Visual Learner- they best learn when they hear and see the things they are learning.
- D. Kinesthetic Learning- best learn when they are doing or applying what they learn.

c. Mental condition	3.29	VMM	4
d. Proper nutrition	3.58	VMM	1
Average weighted mean	3.41	VMM	

Table 10 states the **Manifestation of Classroom Factor** affecting the Pupils at Balili Elementary School. The table indicates the findings that the variety of materials of varied needs of students is strongly affecting the pupils.

It is important to take students' needs and characteristics into account while designing the language programs, classroom activities and materials so that effective and successful instruction can take place. Jones and Jones (2001:29) state that high expectations, active engagement of students, cooperative learning and the incorporation of various aspects of students' cultures are important figures in effective teaching. It is believed that incorporating one of these methods that are designed in line with students' personal, developmental and cultural needs into instruction will help teachers to reduce classroom management problems.

Materials in the typical general education classroom tend to be limited in scope. Commonly found supplies such as textbooks may be supplemented with student workbooks or worksheets. Sometimes manipulative and specific multimedia such as number-line sets for math, a globe for social studies, or videos, software, and Internet resources may be used to support learning. These tools typically function as add-ons to the curriculum rather than as an embedded tool for delivering the curriculum. Many schools and districts do not have the funds to purchase these add-on materials. Students in those districts have few options that can be matched to their learning styles or diverse needs. Alternative formats of basic materials can also be provided for students with disabilities, such as Braille texts for students who are blind, large print text for students with

low vision and CDs with audio output for students with dyslexia (Rose, Meyer, & Hitchcock, 2006).

Table 10. Extent of Classroom Factor Manifested by the Pupils at Balili Elementary School.

a. Sufficient textbook and instructional materials	3.60	VMM	2
b. Conducive classroom environment	3.49	VMM	3
c. Variety of materials of varied needs of students	3.68	VMM	1
d. Good classroom management	3.48	VMM	4
Average weighted mean	3.56	VMM	

Table 11 illustrates the Manifestation of Social Factor Affecting the Pupils at Balili Elementary School. Social factor ranked second in the categories of the factor affecting the learning of the pupils. Computer games, Television violence, direct provocation and frustration are very much manifested by the pupils.

Television Violence ranked first on the indicators of Social Factors that affects the learning of the pupils. Pupils are imitating what is on the television. This affects the learning of the pupils they cannot be able to concentrate on their studies because of watching television. According to Albert Bandura

The results are mixed regarding the effects of TV viewing by preschoolers. The important findings suggest that when a program provokes aggressive fantasies, preschoolers seem to be most susceptible. The impact of aggressive content can be toned down if children view TV with a trusted adult who can guide them. Studies have suggested a causal direction from heavy TV viewing to aggressive behavior (Fried et al., 2000; Gupta et al., 2001; Silvern and Williamson, 1987; Singer and Singer, 1981).

Table 11. Extent of Social Factor Manifested by the Pupils at Balili Elementary School.

Social Factor	WM	DE	RANK
a. Computer games	3.65	VMM	2
b. Television Violence	3.77	VMM	1
c. Direct provocation	3.63	VMM	3
d. Frustration	3.33	VMM	4
Average weighted mean	3.59	VMM	

Table 12 presents the Manifestation of Socio- Cultural Affecting the Pupils at Balili Elementary School. The table indicates that the socio- cultural factors are very much manifested by the pupils. The indicators are inability to have basic necessities of life, disruption of marriages, production of single –parent families, and difficulty in maintaining interpersonal ties, family structure and social control.

The significant increase in family dissolution by divorce and separation and its impact on child development have posed major challenges to the child mental-health profession for the 1980's. The problem is formidable in numbers alone. There are currently twelve million children under the age of eighteen in this country whose parents are divorced. Around one million children a year are affected by the dissolution of their families. It is estimated that 45 percent of all children born in this country in any given year will live with only one of their parents sometime before they are eighteen (Francke et al., 1980). The emotional impact on children of family disruption is significant and tends to vary according to a variety of factors, including the phase of family disruption and the developmental stage of the child. In addition to the emotional impact, the financial burden on the family is also significant, due to the costs of litigation and of maintaining two households. A recent Census Bureau report found that only 25 percent of divorced, separated or single mothers received child support.

Table 12. Extent of Socio-Cultural Factor Manifested by the Pupils at Balili Elementary School.

Socio- Cultural Factor	WM	DE	RANK
a. Inability to have basic necessities of life	3.52	VMM	2
b. Disruption of marriages	3.54	VMM	1
c. Production of single-parent families	3.5	VMM	3
d. Difficulty in maintaining interpersonal ties, family structure and social control	3.49	VMM	4
Average weighted mean	3.51	VMM	

Table 13 illustrates the Manifestation of Environmental Factor Affecting the Pupils at Balili Elementary School. This table indicates that environmental factor has a strong effect on the pupils. The noisy environment is the most that affect learning process of the pupils and it can cause aggressive behavior most especially towards to their classmate.

Gerges (1991) affirmed that sound and noise are the same physic phenomenon, although they are not synonyms. A noise is just a type of sound, but a sound is not necessarily a noise. Under the psycho-acoustic point of view, a noise would be an unpleasant sensation triggered by the reception of acoustic energy.

Sound, music or noise trigger pleasant or unpleasant sensations in an individual and, therefore, some researchers interested in the psycho-physic aspects developed studies to evaluate the existing correlation between noise, mood and irritability (Lundquist et al., 2003).

If the adequate notion of a problem's definition already took us to its solutions, we believe that the effective noise control inside a school would be totally outlined. Nevertheless, what differs these positions is the individuality of each human being when facing a learning process in an unfavorable listening situation. Despite knowing that noise is part of our everyday lives, not only for those people who live in great urban centers and that are becoming more and more patient with the sounds (desirable or not) that might be music, honks, bird, sirens, etc.; we must focus how we deal with these sounds when they occur

together with learning situations, where all subject's energy should be directed to his studies, during the hard task of listening, saving and learning regardless of the noise.

We can realize that each human being refers differently to the same competitive noise. While one person doesn't even notice that a car with loud-speakers is passing by during his class, another one may feel the necessity of sitting forward, another may be disinterested of the subject since he is not being able to follow what the teacher is saying, another one may start feeling some physic annoyance, such as headache, tiredness, muscle pains, etc.

According to Bentler (2000), what interferes the most in a classroom is the signal-to-noise ratio (SNR). The more positive it is, the better the listening situation offered to the students will be. The closer to zero or negative it is, the worse will be the situation for the students to understand the teacher's speech.

We shall stress that there is a recommendation that the mean noise level inside a classroom should be between 35 to 45 dB (Table 1), once levels between 50-65dB (although acceptable) provoke a mild stress initiating the hearing discomfort, vigilance and agitation (Thiery e Meyer, 1988).

Table 13. Extent of Environmental Factor Manifested by the Pupil at Balili Elementary School.

Environmental Factor	WM	DE	RANK
a. Noisy Classroom Environment	3.76	VMM	1
b. Crowdie Classroom Environment	3.66	VMM	2
c. bad odors Classroom Environment	3.53	VMM	3
Average weighted mean	3.65	VMM	

Table 14 presents the summary of the manifestation of the types of Factors Affecting the Pupils at Balili Elementary School. As an overall it has been found that the environmental factor is ranked as the first followed by social factor, classroom factor, socio- cultural factor, home factor, pupil factor and lastly teacher factor affects the learning of the pupils. As reflected by the computed average weighted mean was 3.47 and it means that the grade six pupils of Balili Elementary School agreed that these indicators affect their learning.

The environment factor is the first rank because it is the most factor that influence the pupils to exhibit aggression behavior. According to Albert Bandura aggression is primarily a learned form of social behavior neither innate urges toward violence nor aggressive drives aroused by frustration are the roots of human aggression. He said that aggression is the learned behavior under voluntary control. The learning of aggressive behavior occurs by observation and modeling. For example, a child watches an angry parent strikes out another person. Learning aggressive behavior also takes place by direct experiences. The person feels anger and behaves aggressively. If behaving aggressively brings rewards, the behavior is encouraged.

In addition, conducive learning

The teacher factors is the last rank because teacher factor less affect the behavior of the pupils. Teachers are judged more strictly than other professionals. The personality they project determine the impressions they make upon students and colleagues. Their poise, bearing, manner of dressing and facial expression have an impact on their inter action with pupils.

The competent and committed teacher facilitates learning. He/she opens the door. The learner enters by himself/herself. Teacher is licensed professional teachers who possess dignity and reputation with high moral values as well as technical and professional competence. Teacher's passion for teaching, sense of humor, patience and enthusiasm and other positive personal attributes make him/her a true facilitator of learning.

Social learning theories help us to understand how people learn in social contexts (learn from each other) and informs us on how we, as teachers, construct active learning communities. Lev Vygotsky (1962), a Russian teacher and psychologist, first stated that we learn through our interactions and communications with others. Vygotsky (1962) examined how our social environments influence the learning process. He suggested that learning takes place through the interactions students have with their peers, teachers, and other experts. Consequently, teachers can create a learning environment that maximizes the learner's ability to interact with each other through discussion, collaboration, and feedback. Moreover, Vygotsky (1962) argues that culture is the primary determining factor for knowledge construction. We learn through this cultural lens by interacting with others and following the rules, skills, and abilities shaped by our culture.

Table 14. The Summary of the Extent of Manifestation of the Factors Affecting the Pupils at Balili Elementary School.

CONCLUSIONS AND RECOMMENDATIONS

This chapter presents the conclusions and recommendation of the study.

Conclusions

In the light of the findings of these indicators, the following conclusions were drawn.

1. The Relational Aggression and Hostile-Aggression are the common aggression to the grade six pupils of Balili Elementary School.
2. Proactive Aggression is sometimes exhibited by pupils in the school.
3. The Environmental Factor affect the pupil's aggression.
4. The teacher factors less affect the pupil's aggression.

Recommendations

The following recommendations were formed based on the findings and conclusion;

1. The teacher first called the attention of the pupils and direct to the proper authorities for proper counseling.
2. Teachers should reminds pupils to consider the ideas of others to avoid proactive aggression.

Esc

~

Tab

3. The teacher through the Parent Teacher Conference Association PTCA discuss the concern regarding the environmental factor affecting the learning and behavior of the pupils.
4. The teachers always make sure to uphold the code of ethics most especially their proper grooming as a teacher.
5. The DepEd should conduct regular method among teachers on the role to combat aggression of pupils.

Sir:

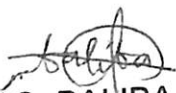

We, the researchers of Bachelor of Elementary Education of King's College of the Philippines are currently enrolled in the subject Educational Research and presently conducting a study entitled "Hostile-Aggressive Behavior Affecting the Learning of the Pupils" in partial fulfillment of the requirements of the subject.

In this regard, we would like to ask your permission to administer our questionnaires to the Grade VI pupils. Rest assured that all data to be gathered will be treated with utmost confidentiality.

We are looking forward to your favorable response.

Thank you and God bless!

Respectfully yours,

NOVY S. BALIBA

A SURVEY QUESTIONNAIRE (APPENDIX A)

STUDENT'S PROFILE

Name; (optional)_____

Please put a check mark on the column that corresponds your action on the extent of the following problems that signifies your behavior whether you are hostile aggressive, instrumental aggressive, relational aggressive, reaction aggressive and proactive aggressive.

4-Very much Exhibited

3-Much Exhibited

2- Exhibited

1-Not Exhibited

I.Types of Aggression

	1	2	3	4
1.Instrumental Aggression				
a. Kicking chairs to get what he want.				
b. punching the wall to release your anger				
c. throwing your notebook, paper, and others.				
d. destroying their own things				
2.Hostile-Aggression				
a. kicking your enemy				
b. underestimated others				
c. punching others to satisfy yourself				
d. threatening to beat up someone				
e. harming other person				
3. Relational Aggression				
a. laughing someone's mistake				
b. not making friends with others because of physical appearance.				

c. undermining your classmate				
d. teasing your classmate				
e. spreading rumors toward others				
f. damage other peer relationship				
4. Reaction Aggression				
a. misinterpret others intention				
b. blaming others for your mistake				
c. crying if frustrated				
d. shouting if being threatened				
5. Proactive aggression				
a. dominating others				
b. do not care about the intentions of others				
c. threatening others to get what you wanted				
d. bullying others				

Instruction; Please put a check mark on the column that corresponds your perception on the manifestation of the following factors of aggression encountered in teaching.

BIOGRAPHICAL SKECTHES

'EDUCATION is the only thing that no one can take out from you'

'Education is the only thing that our parents can give as their legacy'

From the sierra Madre of region III where you can find the beautiful 'Rice Granarry of the Philippines'. There is a small village at the municipality of General Tinio, a baby was born on a cold month of January 24, 1997 named Ronalyn Cuyapen Baglao. She has an older brother named Ronaldo Baglao. Their lovingly parent namely Ms. Sally and Romel Baglao. Her mother is from Ilocos Sur and her father is from Isabela but they are currently living at the province of Nueva Ecija. She's belong to the bag-o tribe because she is a half-Ilocano and half-Kankana-ey.

She finished her Elementary Schooling at their place, Palale Elementary School. And continued her Secondary Schooling at BuklodPalad National High School. Where she successfully graduated in high school.

She is currently studying at King's College of the Philippines taking Bachelor of Elementary Education. She is now a fourth year student. As of now, she is residing at Balili La Trinidad Benguet with her cousins.

"Success is not built on success.
It's built on failure. It's built on frustration.
Sometimes it's built on catastrophe"

-Summer Redstone-

From the Rocky Mountains and beautiful spots is located at Balakbak, Kapangan, Benguet.

She is NovySeminBaliba born on the 20th day cold month of January. She is the daughter of

Mr.SebioBaliba and Mrs.NoriaBaliba. She is the first child among the family members. She

graduated at GBDAIS at Balakbak Elementary School in the year 2012-2013.

At present she is studying at Kings College of the Philippines with the course of BEED. At first she doesn't know if what the course she choose is but with the help of God and her family she enters to the door of education. She believes that being a teacher is not an easy job but she know that she can surpass the struggles that she may face in her journey. As the saying goes:

"A business sells products, a teacher sells ideas.

An architect build structures, a teacher builds attitudes.

An engineer makes machines work, a teacher makes minds work.

A doctor cures illness, a teacher cures negative attitudes. "

She is kind and willing to help other people except money. Her passion is to teach children and help them to achieved their dreams in life and experience what she is now.

She believes in the saying "Do all the good you can. By all the means you can. In all the ways you can. In all the places you can. At all the times you can. To all the people you can. As long as ever you can."

— John Wesley

In the craggy place of Sadsadan Bauko Mountain Province, a warmhearted baby girl was born that was on July 26, 1996. They named her Arlyn A. Cabanilla. She was the fifth child of Mr. and Mrs. Arnold and Ellen Cabanilla. Despite of challenges that they face she was able to obtain and finished her elementary at Sadsadan Bato elementary school and continued her secondary at Bauko Catholic school, with the unending support of her doting parents she was able to continue her tertiary at Kings College of the Philippines and took the course Bachelor of Elementary Education.

It is better to taste the hardship of EDUCATION than to taste the bitterness of IGNORANCE.

In the mountainous place of Leseb, Bauko Mountain Province a baby girl was born in the coldest month of August 26, 1997. A baby girl face creates a smile to people's faces especially to her proud parents and gave a name Angela. Her father Claudio Tomey is working hard for the future of her baby while her mother Norma Tomey is busy taking care of her beloved baby.

As time passed by, she grew up and took her basic education at Leseb Elementary School and finished as second honorable mention. She continued her studies at Mabaay National High School and graduated at Leseb National High School. There are many struggles that comes in her life but she try to overcome it and so she decided to continue her journey in life. At present she is studying at Kings College of the Philippines taking up Bachelor of Elementary Education.

Esc

Risk your life to those who deserve to live not to the one who doesn't.---Clayana

She is Ruby Claire SacpaUmis the Third child of Ferdinand Umis and Tessie Umis. She came from the cold place of Sinipsip Amgaleyguey Buguias Benguet. She is born on June 9, 1997 at Buguias Benguet. She has a 3

sibling named MauriciaUmis, Fyrick Franco Umis, and Ezra KerneyUmis they are all loved their parents very much. She is an observant person that seeks for the things that she can't understand and can sacrifice her life for the sake of her love ones. She studied Elementary at Sinipsip Elementary School and Secondary at Sinipsip National High school- Main. She is friendly but she can become your worst enemy if you go against her path.

In the present she is studying at Kings College of the Philippines taking up Bachelor of Elementary School Fourth year Student. She loves watching horror movies and love reading fiction stories; she also loves singing very much. She believes that "everything you see is not real sometimes it is a mask to cover the truth, don't be a foolish to believe someone who cannot trust his\ herself."
